

USG Energy Engineering Services

As a specialized service USG Energy provides personnel for drilling, production and engineering activities, as well as medical back-up in offshore work. The Engineering Business Unit employs multidisciplinary technical specialists for projects in the areas of engineering, maintenance and construction. Engineering involves office based positions for designing installations. Construction involves development or major modifications; for example the adaptation of a factory. Maintenance concentrates on preventative maintenance of installations both onshore and offshore. Professionals are employed within the Oil and Gas Industry, the petrochemical and chemical industry, ship-building and specialized machine-building, both nationally and internationally. The positions vary from designer to engineer and from workpreparator to construction supervisor. Apart from these positions we provide specialized support such as project secretaries, contract engineers and HSE Engineers.

Engineering Services

- We have a leading position providing individual project assistants as well as complete multidisciplinary project teams. Clients may use the separate services of USG Energy, or the full service concept where we can take over the logistics and planning of personnel services.
- The operational personnel of the Engineering Business Unit will have frequent contact with the professionals employed regarding the progress of work. Appraisals of employees provided will be assessed on a regular basis.
- USG Energy continuously invests in its personnel by means of training and further education, in some cases to suit a specific client requirement.

Flexible and pro-active partner for the Engineering Industry

Years of experience and a great knowledge of the market make the team of USG Energy Engineering Business Unit an appreciated partner. We can be quick and flexible when it comes to specific questions and wishes of clients with regards to engineering professionals. A candidate's employment history is simply not enough: USG Energy will concentrate on an actual match between personnel and project, including support and possibly education where necessary. Over and above this we are pro-active in participation in the client's project and will look for crucial professionals at an early stage.

Career perspectives in the Engineering

Well educated, experienced and motivated personnel are the key to success for USG Energy. Our primary and secondary working conditions, which are flexible and open to adjustments, are fundamental in this. By means of specialized training and support USG Energy can offer its professionals various development opportunities, for instance from offshore to onshore positions. This also applies to people who join from outside the industry, with or without working experience. In addition we will carefully attune the educational background and experience of the professionals to the wishes and criteria of the client.

USG Energy: well trained, experienced and motivated personnel as key to success in the Oil and Gas Industry.
